USER MANUAL

An Easy and Simple
Guide

PROJECT PICTURES

This is screenshot 1 of the frontend code.

```
[4] import ipywidgets as widgets
    from IPython.display import display
    from transformers import pipeline

    # Initialize the emotion detection pipeline
    emotion_pipeline = pipeline("sentiment-analysis", model="j-hartmann/emotion-english-distilroberta-base")

    # Function to detect emotion
    def detect_emotion(text):
        result = emotion_pipeline(text)
        return result[0]['label']
```

PROJECT PICTURES

This is screenshot 2 of the frontend code.

```
Untitled10.ipynb
+ <> + rT
# Create widgets
heading = widgets.HTML(value="<h1>Emotion Detection</h1>")
text_input = widgets.Text(placeholder='Enter your text here...')
button = widgets.Button(description='Detect Emotion')
output = widgets.Output()

# Define button click event
def on_button_click(b):
    with output:
        output.clear_output()
        text = text_input.value
        emotion = detect_emotion(text)
        print(f"The emotion of the text is: {emotion}")
```

PROJECT PICTURES

This is screenshot 3 of the frontend code.

```
button.on_click(on_button_click)

# Display widgets

display(heading, text_input, button, output)
```

Device set to use cpu

Detect Emotion

ACKNOWLEDGEMENTS

I'd like to thank Mrs. Sanjana for teaching me during this internship course. I've learned so much from her/you. And I'm so happy and thankful for such an awesome teacher. I'd like to also thank the internship team for helping me when I needed it. Thank you!

ABOUT ME

- My name is Julia. I play piano, have played at concerts, and my mom is a guitarist.

- My favorite colors are pink, purple and blue, and I love physics.

- I'm from America, while my parents are from different countries, and I go to the 7th grade.
- 

PHOTOGRAPH OF ME

MY JOURNEY WITH CLEVERED

It's been fun.

I have learned interesting things,
and have even made an
awesome project. Thank you
Clevered for helping and guiding
me!;)

Thanks for the help!;)

I've learned how to do some
assignments, and so many other
things. Clevered has made
everything seem so easy, so
thank you Clevered!

APP'S MAIN MENU

1. Introduction to the app/About the app.
2. How to use the app.
3. Demo video.

ABOUT THE APP

The app, Text Emotion Recognition App, can be used to identify people's feelings and emotions. It can analyze hidden messages found in texts, and can even become very useful in the future for even more reasons.

HOW TO USE THE APP

Step 1 :

First, before starting, enter the app. You will see a placeholder where you'll type in a sentence or phrase. Press it, and enter whatever text comes to your mind.

HOW TO USE THE APP

Step 2 :

When you finish writing your text down in the placeholder, press the button which says, “Detect Emotion”, and wait for a few seconds.

HOW TO USE THE APP

The End:

Finally, you'll notice a text that says, "The emotion of the text is:...". Depending on the text you wrote, it will give the emotion.

Here is the video!

DEMO VIDEO

Tip: If it
doesn't
work here,
try it on
Canva!

```
output.clear_output()

text = text_input.value

emotion = detect_emotion(text)

print(f"The emotion of the text is: {emotion}")

button.on_click(on_button_click)

# Display widgets
display(heading, text_input, button, output)
```

Device set to use cpu

Emotion Detection

Enter your text here...

Detect Emotion

```
[2] import ipywidget
    from IPython.display import
    from transformers import pipeline
```

Today, I'm going to teach you
how to use the Text Emotion Recognition App.

TOOLKIT WALKTHROUGH

- Link to the project:

<https://colab.research.google.com/drive/1qCqgWiFCScO>

[hzHHDs5GdGt1A_PeWy6Tz](#)

- Link 2:

Miss, I didn't really understand the option slide, nor this. Where am I suppose to get the links from, and what are they for?

PLACEHOLDER TO TYPE IN

- A screenshot of the placeholder:

- Function:
 1. It's a space where users can write their own text.

Miss, I didn't really understand the option slide, nor this. Where am I suppose to get the links from, and what are they for?

PLACEHOLDER TO TYPE IN

- A screenshot of the placeholder:

- Risks that might happen:
 1. It might not work, maybe it won't allow the user to type.
 2. [A risk]

Miss, I didn't really understand the option slide, nor this. Where am I suppose to get the links from, and what are they for?

DETECT EMOTION BUTTON

- A screenshot of the button:

- Function:
 1. When pressed, it will detect the emotion found in the written text.

Miss, I didn't really understand the option slide, nor this. Where am I suppose to get the links from, and what are they for?

DETECT EMOTION BUTTON

- A screenshot of the button:

- Risks that might happen:
 1. Maybe nothing will happen and it won't work when the user presses the button.
 2. [A risk]

M, I didn't really understand the option slide, nor this. Where am I suppose to get the links from, and what are they for?

CONCLUSION

To use the app, you have to press the placeholder to enter your text, then you have to click the “Detect Emotion” button so the app can analyze the text, and give you the emotion based on the phrase you gave.

THANK
YOU

AND

GOOD
LUCK!
